# GOOD HYGIENE, SAFE FOOD

Hygiene is a top priority in the food industry. Accordingly, workwear for the food sector must meet hygienic standards. That's why the PLANAM Food range is designed according to the recommendations of HACCP (Hazard Analysis Critical Control Point).

////////////////////////////////////

# WHEN IT REALLY MATTERS

The food industry demands “hygienically perfect conditions”. This includes appropriate workwear. Therefore, we have developed our food collection in accordance with the specifications of DIN 10524 for food hygiene and the recommendations of HACCP (Hazard Analysis Critical Control Point): The result: clothing designed to meet the requirements of critical contact points in the food industry.

**ISO 15797**  
Suitable for industrial laundry and shrink-proof

**Lint-free**  
No contamination with lint

**Abrasion-resistant material**  
Extremely hard-wearing with polyester-cotton blend and diagonal twill weave

Linting? No chance! Contamination can't accumulate either – because of the concealed button plackets, smooth stainless steel press studs and inside flap pockets.

**Stainless steel press studs**  
with concealed button placket

**Inside flap pockets**  
prevent contamination accumulation

# STANDARDS & CERTIFICATION

## UV PROTECTIVE CLOTHING WITH INTEGRATED SUN PROTECTION

### HACCP

HACCP stands for "Hazard Analysis and Critical Control Points". HACCP is not a statutory provision but a guideline in which individual requirements for each company are possible. This guideline does not relate to PPE but to food protection.

### DIN EN 10524 FOOD HYGIENE

Workwear certified by DIN 10524 is not PPE worn to protect the wearer of the clothing. The specifications for this standard are designed to maintain impeccably hygienic conditions in the handling of foodstuffs. The nature and scope of this workwear is geared to the specific requirements of the relevant workplace, and to the type of products and processing used. The workwear in food businesses should prevent a situation where unsuitable clothing or deviation from the regulations produces a detrimental effect on the foods being manufactured, handled or brought to the market. How often clothing must be changed is determined by the risk category (RC 1 – 3): RC 1 = changed weekly, RC 2 = changed daily, RC 3 = changed at least once a day; in all classes, an earlier change may be necessary depending on how dirty clothing is.

The largest organ of the human body is the skin, and it is exposed to great danger in summer. UV rays from the sun can increase the risk of skin cancer. Standard textiles are radiolucent, providing insufficient protection.

PLANAM's UV-protective clothing gives guaranteed certified safety. Awarded UV protection certificates "PROTECT 80" and "PROTECT 40", this range guarantees maximum prevention. Just like for sunscreens, the figure indicates the protection factor for spending longer in the sun safely. Our PLANAM models allow the wearer to remain in the sun 80 or 40 times longer than those without protection. With their integrated sun protection factor, the finished garments provide the skin with optimum protection. Those with sensitive skin can stay in the sun longer without having to cover themselves in sunscreen. It is important to know the individual skin type in order to determine the individual's protection time (length of possible exposure to the sun without risk of skin damage). The UV protection factor specified (e. g. Protect 80) gives the factor by which the individual's protection time can be extended just by wearing these textiles.

## THE OEKO-TEX® STANDARD 100

The OEKO-TEX® Standard 100 is an independent testing and certification system for raw, intermediate and end products for textiles from all stages of processing. Examples of certifiable articles are raw and dyed/refined yarns, raw and dyed/refined woven and knitted fabrics, ready-made articles (garments of all types, home textiles, bedding, terry towelling, toys made of textiles and many others).

### Tests for harmful substances cover:

- + substances banned by law
- + substances regulated by law
- + chemicals that are known to be potentially harmful to health (but are not yet regulated by law)
- + healthcare parameters in their entirety, the requirements go well beyond existing national legislation.

### Why OEKO-TEX®?

The OEKO-TEX® Standard 100 was developed in the early 1990s as a response to the need of consumers and the general public for textiles that do not pose a risk to health. Negative headlines such as "Poisons in textiles" were widespread at the time, labelling all chemicals used in the production of textiles as negative and harmful to health.

Yet the demands made of modern textile products cannot be met without using certain chemical substances. Fashionable colours, easy care, long life and many other functional properties are demanded of textiles today and are, to some extent, and depending on their intended use (e.g. for professional and protective clothing), quite indispensable.

# PERSONALISATION IN NEXT TO NO TIME

Workwear is advertising space for your logo and acts like a business card for your company. Personalisation ensures a recognisable and positive company image. Our finishing service brings your message to a wider audience in a customised, professional and fast manner.

PLANAM Individual specialises in personalising your workwear. From reflective appliqués to transfer prints and embroidery, we offer multiple personalisation options of the highest quality. Whether you need small quantities for handicraft businesses or large runs for industrial companies – our team of experts are on hand to provide you with personal advice and detailed information about the optimal finishing types for our products. This also includes finishing options with methods specifically adapted to the certification requirements of certified protective clothing.

**+49(0)5245-86060**

**Individual logo, individual support**  
You can call us for advice from Monday to Friday between 8am and 5pm.
